
Test Engineer – QA Israel

What you will do:

- Function as an instrumental player of software implementation teams throughout the life cycle of the software implementation processes.
- Collaborate with developers and product team to develop a successful product with a high level of quality and stability.
- Analyze and understand each system's environment, architecture, and interdependencies to determine and apply appropriate test methodologies and cases relative to applications being tested
- Design and create test strategies and test cases for features across the system.
- Perform regression testing as part of software verification cycles.
- Use bug tracking software to track and report problems.
- Attend Sprint Planning, Retrospective, and daily Scrum meetings.

Required Skills:

- BA or BSc degree in Biomedical Engineering, Biotechnology and Food Engineering, Biology, Chemical Engineering or similar
- Average grade of 80 and above
- No experience required or up to a year experience
- Ability to understand and analyze the product that consists of multiple elements and technologies
- Ability to prioritize and work on multiple projects/tasks at the same time.
- Excellent analytical, problem-solving and troubleshooting capabilities
- Excellent time management skills and the ability to work in a fast-paced environment, rapidly shifting priorities as required
- Passionate about software
- Self-motivated, well-organized person.
- A quick learner and hard working.
- Must have excellent computer skills
- Must have strong communication skills, both verbal and written
- Must speak, read and write in the English language
